

Leaky Faucets and Fixtures

Dripping faucets, leaking toilet valves and water leaks increase the community's cost to provide water service.

One drop at a time...

It Adds Up Fast!

Leaks and drips squander three valuable resources: water, energy and your money!

Water wasted at 40 pounds pressure:

A 1/32-inch diameter leak wastes 170 gallons in 24 hours

A 1/16-inch diameter leak wastes 970 gallons in 24 hours

A 1/8-inch diameter leak wastes 3,600 gallons in 24 hours

In the long run, it's much less costly to repair existing problems and to conserve resources.
